**What Medical Records and Health Information Technicians Do**

Medical records and health information technicians, commonly referred to as health information technicians, organize and manage health information data. They ensure its quality, accuracy, accessibility, and security in both paper and electronic systems. They use various classification systems to code and categorize patient information for insurance reimbursement purposes, for databases and registries, and to maintain patients’ medical and treatment histories.

**Work Environment**

Health information technicians held about 186,300 jobs in 2012. Most health information technicians work in hospitals or physicians’ offices.

**How to Become a Medical Records or Health Information Technician**

Health information technicians typically need a postsecondary certificate to enter the occupation, although they may have an associate’s degree. Many employers also require professional certification.

**Pay**

The median annual wage for health information technicians was $34,160 in May 2012.

**Job Outlook**

Employment of health information technicians is projected to grow 22 percent from 2012 to 2022, much faster than the average for all
occupations. The demand for health services is expected to increase as the population ages.

**What Medical Records and Health Information Technicians Do**

Medical records and health information technicians, commonly referred to as health information technicians, organize and manage health information data by ensuring its quality, accuracy, accessibility, and security in both paper and electronic systems. They use various classification systems to code and categorize patient information for insurance reimbursement purposes, for databases and registries, and to maintain patients’ medical and treatment histories.

**Duties**

Health information technicians typically do the following:

- Review patient records for timeliness, completeness, accuracy, and appropriateness of data
- Organize and maintain data for clinical databases and registries
- Track patient outcomes for quality assessment
- Use classification software to assign clinical codes for reimbursement and data analysis
- Electronically record data for collection, storage, analysis, retrieval, and reporting
- Protect patients’ health information for confidentiality, authorized access for treatment, and data security

All health information technicians document patients’ health information, including their medical history, symptoms, examination and test results, treatments, and other information about healthcare services that are provided to patients. Their duties vary with the size of the facility in which they work.

Although health information technicians do not provide direct patient care, they work regularly with registered nurses and other healthcare professionals. They meet with these workers to clarify diagnoses or to get additional information to make sure that records are complete and accurate.

The increasing use of electronic health records (EHRs) will continue to change the job responsibilities of health information technicians. Federal legislation provides incentives for physicians’ offices and hospitals to implement EHR systems into their practice. This will lead to continued adoption of this software in these facilities. Technicians will need to be familiar with, or be able to learn, EHR computer software, follow EHR security and privacy practices, and analyze electronic data to improve healthcare information as more healthcare providers and hospitals adopt EHR systems.
Health information technicians can specialize in many aspects of health information. Some work as medical coders, sometimes called coding specialists, or as cancer registrars.

**Medical coders** typically do the following:

- Review patient information for preexisting conditions such as diabetes
- Retrieve patient records for medical personnel
- Work as a liaison between the health clinician and billing offices

**Cancer registrars** typically do the following:

- Review patient records and pathology reports for completeness and accuracy
- Assign classification codes to represent the diagnosis and treatment of cancers and benign tumors
- Conduct annual follow-ups to track treatment, survival, and recovery
- Analyze and compile cancer patient information for research purposes

Maintain facility, regional, and national databases of cancer patients.

**Work Environment**

Health information technicians held about 186,300 jobs in 2012. Most health information technicians work in hospitals or physicians’ offices. Others work in nursing care facilities or for government entities. Technicians typically work at desks or in offices and may spend many hours in front of computer monitors.

The industries that employed the most health information technicians in 2012 were as follows:

<table>
<thead>
<tr>
<th>Industry</th>

</tr>
<tr>
<td>Government</td>
<td>5</td>
</tr>
</tbody>
</table>

**Work Schedules**

Most health information technicians work full time. In healthcare facilities that are always open, such as hospitals, technicians may work evening or overnight shifts.

**How to Become a Medical Records or Health Information Technician**
Technicians organize and maintain data for clinical databases and registries.

Health information technicians typically need a postsecondary certificate to enter the occupation, although they may have an associate’s degree. Many employers also require professional certification.

**Education**

Postsecondary certificate and associate’s degree programs in health information technology typically include courses in medical terminology, anatomy and physiology, health data requirements and standards, classification and coding systems, healthcare reimbursement methods, healthcare statistics, and computer systems. Applicants to health information technology programs increase their chances of admission by taking high school courses in health, computer science, math, and biology.

**Important Qualities**

**Analytical skills.** Health information technicians must be able to understand and follow medical records and diagnoses, and then decide how best to code them in a patient’s medical records.

**Detail oriented.** Health information technicians must be accurate when recording and coding patient information.

**Integrity.** Health information technicians work with patient data that are required, by law, to be kept confidential. They must exercise caution when working with this information in order to protect patient confidentiality.

**Interpersonal skills.** Health information technicians need to be able to discuss patient information, discrepancies, and data requirements with other professionals such as physicians and finance personnel.

**Technical skills.** Health information technicians must be able to use coding and classification software and the EHR system that their healthcare organization or physician practice has adopted.

**Licenses, Certifications, and Registrations**

Most employers prefer to hire health information technicians who have professional certification. A health information technician can earn certification from several organizations. Some organizations base certification on passing an exam. Others require graduation from an accredited program. Once certified, technicians typically must renew their certification regularly and take continuing education courses. Certifications include Registered Health Information Technician (RHIT) and Certified Tumor Registrar (CTR), among others. Many coding certifications require coding experience in a work setting.

**Advancement**

Health information technicians may advance to other health information positions by receiving additional education and certifications. Technicians can advance to a medical or health services manager after completing a bachelor’s or master’s degree program and taking the required certification courses. Requirements vary by facility.

**Pay**

Medical Records and Health Information Technicians

The median annual wage for health information technicians was $34,160 in May 2012. The median wage is the wage at which half the workers in an occupation earned more than that amount and half earned less. The lowest 10 percent earned less than $22,250, and the top 10 percent earned more than $56,200.

Most health information technicians work full time. In healthcare facilities that are always open, such as hospitals, technicians may work evening or overnight shifts.

**Job Outlook**

Employment of health information technicians is projected to grow 22 percent from 2012 to 2022, much faster than the average for all occupations. The demand for health services is expected to increase as the population ages. An aging population will need more medical tests, treatments, and procedures. This will mean more claims for reimbursement from insurance companies. Additional records, coupled with widespread use of electronic health records (EHRs) by all types of healthcare providers, could lead to an increased need for technicians to organize and manage the associated information in all areas of the healthcare industry.

Cancer registrars are expected to continue to be in high demand. As the population ages, there will likely be more types of special purpose registries because many illnesses are detected and treated later in life.
Job Prospects

Prospects will be best for those with a certification in health information, such as the RHIT or the CTR. As EHR systems continue to become more common, health information technicians with computer skills will be needed to use them.
