

1. What is an IM? Explain an example from one of the species we have studied.

2. From the “Coy Female” article: what are the advantages for a female primate if she mates with more than one male?

3/4. what are the major anatomical and behavioral differences between the galagos (family *Galagonidae*) and the true lorises (the *Loridae*)?

5/6/7/8 Briefly describe the specialization of each of these ANATOMICAL topics for lorises in general (these are the same for both slow and fast; these will be true of lemurs too)

TEETH:

CLAWS/NAILS:

EYES AND EYE SOCKETS

SNOUT/SENSE OF SMELL

9/10 Your sociology teacher says that only humans have culture; give two examples that suggest that non-human primates have culture too, explaining how your examples may change his/her mind.

PRINT NAME _____

BONUS 1: why are galagos nicknamed “bush babies”?

BONUS 2: what is so unusual about the vertebrae of the potto’s neck?
