

**1. Which is NOT a general characteristic of lemurs and lorises?**

- A. 2.1.2.3 including a tooth comb
- B. Grooming claws – at least two
- C. Post Orbital Bar, but no postorbital closure of eye socket
- D. Snout with moist nose
- E. Sense of vision very important; smell and hearing are not.

**2. Which is FALSE about tarsiers?**

- A. Have long legs with elongated tarsal bones
- B. Live only on islands of Malaysia, Indonesia, Philippines, etc
- C. Eat almost 100% insects and animals – ie, almost no vegetation
- D. At least one species pair-bonds
- E. They are preyed upon by hungry slow lorises
- F. There are 17 distinct species of tarsiers

**3. The genus *Euoticus* of the family Galionidae has unusual incisors, and claws, too. How does it use these claws and teeth?**

**4/5 The Falk book compared a Galago with the Potto; in what ways are these two animals different from each other?**

**6/7 Many primatologists now group the tarsiers into the clade of monkeys and apes (called Haplorhini) instead of with the lemurs and lorises (Strepsirhini); what characteristics do tarsiers have that suggest this new classification?**

**3 points . WHAT DO EACH OF THESE TERMS REFER TO?**

**olfactory bulb**

**polygyny**

**Tapetum lucidum**

**intermembral index**

**cryptic feature**

**fovea**

**PRINT NAME** \_\_\_\_\_

**BONUS:** describe one example of behavior that would cause us to consider that primates have culture; point out how we know that your example is not just instinct.
