

1/2. How is the NEW Linnaean classification of New World Monkeys (Falk) different from the traditional one in Rowe? Specify families and genera.

3/4. Which genera of NWM have adult prehensile tails?

Which one has a tail that is somewhat different?

In what way is it different?

What characteristic do all of them share that distinguishes them from the other NWM?

5/6 A general of ecology is that two similar species cannot occupy the same area permanently; yet as many as seven different species of NWM can live and feed in the same geographical area. How can they do this?

7. Describe two ways (anatomy and/or behavior) that *Cebus* is more like an Old World Monkey or ape than like the other New World Monkeys.

8. What are the hypotheses about why *Aotus* is nocturnal? (A comparison with *Callicebus* might be appropriate.)

9/10 Compare *Ateles* and *Alouatta*; what is the relationship between brain size and feeding behavior?
